Utilitaire de mise à l'heure de votre PC

https://www.facebook.com/groups/964085193961165/permalink/1976086506094357/?paipv=0&eav=AfbNjIeVz0uwchcs6_WDw27AkKXHQxi4Y_UBM6sg0WvLZTUqgGgTzFVXy-iAOWOE9hs&_rdr

BktTimeSync adjusts the PC's time using an internet reference server (NTP server) or a GPS receiver connected via USB, serial port, or Bluetooth.

Excellent for use with digital modes such as FT8, JT9, JT65, JS8Call, and others.

For the operation of this program, an active internet connection or a GPS receiver is required. Supports the AutoGrid feature of WSJT-X. For configuration, refer to the Help (F1) or user manual.

The program works with all versions of Windows, 32 or 64-bit.

Collaborations:

- Thanks to Remy F6ABJ for testing the TSIP protocol and translating the interface into French.
- Thanks to Xavi EA3W for the Spanish and Catalan translations
